Backup and Restore of old Dspace to New Dspace versions.

Lib Power Tech October 20, 2022

1. Below are three essential backups to take in dspace.

1.dspace.backup (Database backup)

2.assetstore (All uploaded files for e.g, pdf, image,etc..)

3 . log (Configuration files)

Step – 1

2. Take a backup of Dspace database.

Assume that the old version of Dspace is running. Take a PostgreSQL database backup.

Open a Terminal and apply following commands,

```
Code
sudo su - postgres
```

```
Code
pg_dump dspace > dspace.backup
```

The above command take a backup of Dspace database and store in **/var/lib/postgresql/**

Copy the **database backup** file to a safe place.

Step – 2

3. Take a backup assetstore and log folders.

Here we are going to backup essential things. All uploaded files stored in **assetstore** folder.

Save the **assetstore** and **log** files to External hard disc. (below red color command your external hard disc storage location)

```
Code
cd /media/your pc name/External hard disc name
```

```
Code
sudo zip -r assetstore.zip /dspace/assetstore
```

```
Code
sudo zip -r log.zip /dspace/log
```

Step – 3

4. Restoration of backup to the latest version of Dspace

- > **Install latest Dspace.**
- > Copy the **assetstore**, **log** folders, and **database.backup** to **home** folder of the system.
- > Extract (unzip) the **assetstore** and **log** folders.
- > Follow the below steps to restore old Dspace backup.

Stop Tomcat server

```
Code
sudo service tomcat stop
```

Remove the new dspace assetstore and log folders.

```
Code
sudo rm -rf /dspace/assetstore
```

```
Code
sudo rm -rf /dspace/log/
```

Move the old dspace assetstore and log folders.

Move your old assetstore and log folders to /dspace folder. (Copy & paste the assetstore and log folder in Home folder)

```
Code
sudo mv /home/assetstore /dspace
```

```
Code
sudo mv /home/log /dspace
```

Restoration of database

```
Code
sudo systemctl stop postgresql
```

```
Code
sudo systemctl start postgresql
```

Drop the database and create a new one.

Apply following commands one by one,

```
Code
sudo -u postgres psql
```

```
Code
DROP DATABASE dspace;
```

```
Code
CREATE DATABASE dspace;
```

```
Code
\quit
```

Restore the data base backup

Make sure that the **dspace.backup** file in home folder.
Apply the following command one by one to restore the **database backup**.

```
Code
sudo su postgres
```

```
Code
psql -f dspace.backup dspace
```

Install pgcrypto postgres extension

Execute the following commands one by one,

```
Code
sudo su postgres
```

```
Code
psql --username=postgres dspace -c "CREATE EXTENSION pgcrypto;"
```

```
Code
exit
```

Apply following commands

(Dspace database version check)

```
Code
sudo /dspace/bin/dspace database info
```

(Upgrade old database to new database migration)

```
Code
sudo /dspace/bin/dspace database migrate
```

(Index Created)

```
Code
sudo /dspace/bin/dspace index-discovery -b
```

(All types of files configuration process, for E.g pdf, image, video, audio and etc.. this command long process)

```
Code
sudo /dspace/bin/dspace filter-media
```

(Index configuration)

```
Code
sudo /dspace/bin/dspace index-discovery
```

(Index update)

```
Code
sudo /dspace/bin/dspace index-discovery -o
```

Restart Tomcat

```
Code
sudo service tomcat start
```
